

PUMP CYCLE COUNTER

This is a device that is installed on the pneumatic circuit of diaphragm pumps.

It measures the number of strokes performed by the diaphragms and therefore the number of cycles.

Pump cycle counter can be used to activate various types of controls, such as for example, the litres of liquid delivered by the pump, according to its displacement capacity, and to remotely control its operation.

DESCRIPTION	CODE
Diaphragm stroke counter sensor for BOXER series N.O. and N.C.	CONTCLC0018AOT
Diaphragm stroke counter sensor for CUBIC15 N.O. and N.C.
